

Vertical Blind Systems

This brochure contains colour illustrations and a summary specification for each of the systems in this product group to assist your clients in making their choice.

Either motorised or manually operated, Silent Gliss vertical blind systems can accommodate straight, curved or sloping applications. All systems can be supplied with either 89mm or 127mm louvres in a wide choice of fabrics.

Silent Gliss 2810 ►
Mono-control hand operation Vertical blind.

The 2810 is controlled by one smart, sturdy bead chain with automatic override. This eliminates snags and tangles associated with conventional dual operation systems. Although the profile is one of the shallowest on the market, there is also a recess profile available which allows the fabric louvres to hang close to the ceiling should you wish. The finished appearance is further enhanced by the discreet fixing brackets that sit within the profile footprint. It cannot be bent and is suitable for blinds up to 5m with either single, pair, multiple or asymmetrical stacking.

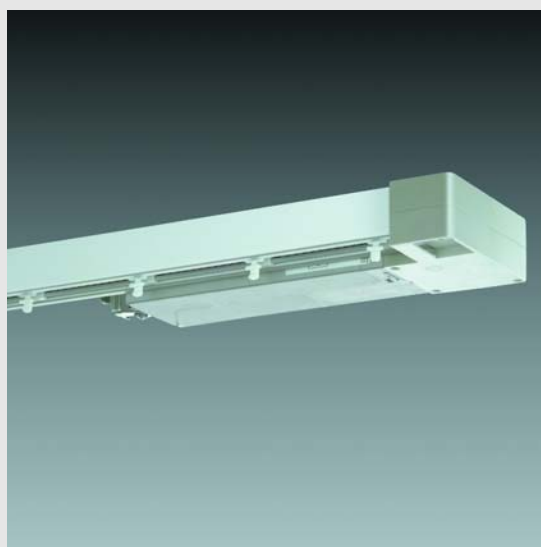

◀ Silent Gliss 2900
Mono-control hand operation, purpose-designed for curved and sloping installations.

A unique belt operation allows the 2900 to be bent to a minimum radius of 500mm. One robust operating handle is used to both open and close and tilt the strips. The system is fixed to the ceiling with discreet clamps, alternatively it may be recessed using a special recess profile (these cannot be bent). Wall fix with brackets is also available. For blinds up to 6m with either single, pair, multiple or asymmetrical stacking. System 2900 can be used with heavy louvres such as PVC and aluminium.

Silent Gliss 2950 ►
Electric operation, purpose-designed for curved and sloping installations.

As with the 2900, the 2950 system can be bent to a tight radius. This system combines the advantages of the 2900 system with electric operation. System 2950 is available with two different motor options depending on the application. For blinds up to 6m with either single, pair, multiple or asymmetrical stacking.
