

Skylight Shading System Silent Gliss 8800

Skylight Shading Systems

The sun - an essential energy source of life.

Daylight is vital to our lives, giving us the vigour to function properly.

Roofs form an opaque barrier between us and the sun. This leads more architects to design buildings with large glass roofs, allowing sunlight to fill the interior space.

However, even though natural sunshine is welcome in buildings, sometimes we need to limit or re-direct the light. Ideally, we need controllable daylight.

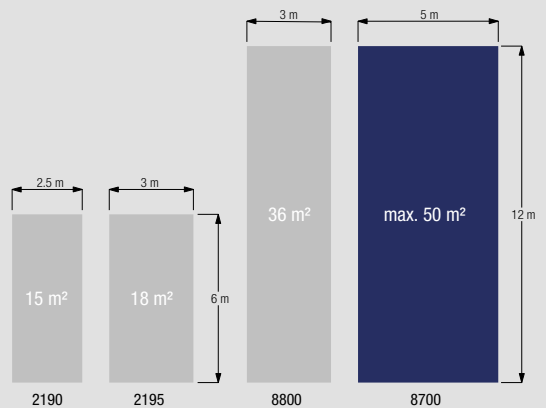

Silent Gliss has developed solutions that allow control and optimisation of daylight in large glass facilities in order to improve quality of life.

Skylight Shading System Silent Gliss 8700

A strong and technically advanced glass roof shading system. The innovative design allows controllable daylight for the largest applications with a uniform construction and an elegant 'wave' look.

One Silent Gliss 8700 can accommodate fabrics up to maximum 50m². With the ability for side-by-side fitting, multiple systems can be installed in parallel. This allows huge glass structures to be handled with this elegant new 'roman blind' style of window treatment.

A wide selection of fabrics in different transparencies helps to limit the daylight according to specific needs. Fabric supporting parts are made from flame retardant and UV-resistant material.

Cantilever options allow different application shapes in order to fulfil all requirements of today's glass roof architecture.

The reliable Silent Gliss motors mean that horizontal and sloping applications up to 30° can be operated by fingertip. The distance between the side profiles can be adjusted to give an even and uniform appearance in the room.

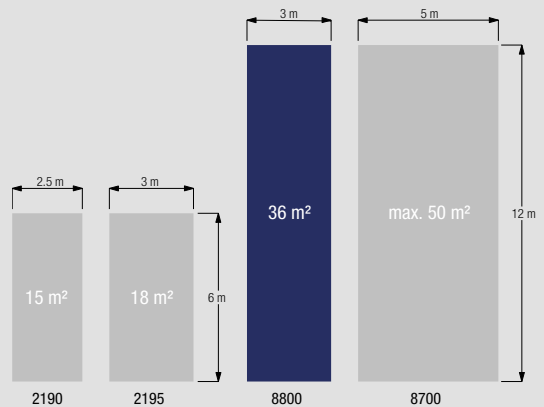

Skylight Shading System Silent Gliss 8800

A new approach creates a unique look.

The Silent Gliss 8800 provides an innovative and extremely elegant way of shading large glass roofs, lobbies or large wintergardens by combining side profiles and fabric panels. The panels can be both tilted and fully retracted in order to optimise daylight management. Solar protection and a free view to the sky are possible at the same time.

The System is suitable for glass roofs up to 36m², as well as horizontal roofs and can be used for sloping applications up to a maximum angle of 30°.

This novel concept - panels on glass roofs - enables the sun to be redirected according to your needs. Using this innovative method of light shading it can radically alter the look of a room.

Silent Gliss has selected a specific range of fabrics for this application. Panel supporting parts are built in flame retardant and UV-resistant material. The panels can be retracted and removed for easy and efficient cleaning.

Silent Gliss is the leading global supplier of motorised and manual curtain and blind systems in the high quality market. We offer our customers the very best in terms of quality, design, technology, service and individuality. Our core competence is innovation - inspired and driven by customer needs. A team of highly skilled and experienced professionals works on new developments of new and the improvement of existing products. With committed customer support teams Silent Gliss provides an extensive range of services including technical advice, fitting services and maintenance all around the world.
